

Product Catalogue

On to a great race season –
with Backs!

Backs

Dear fanciers,

It is with great pleasure that we present our new Backs catalogue. Once again this year, we remain true to what has driven us for decades: care, quality and respect for your pigeons. In everything we develop, their health is central — from natural ingredients to well-thought-out nutritional formulas that fit perfectly into the daily practice of every fancier.

In this brochure you will again find our trusted range of products, enriched with insights gained over recent seasons. Many fanciers once again relied on timeless products such as our Backs Picking blocks: a true classic that supports pigeons with high-quality, concentrated nutrients and has ensured vitality and stability in the loft for generations.

Glut-Amin also remains a product widely used by many sport friends. Thanks to its complete spectrum of amino acids, supplemented with energy, electrolytes and B-vitamins, it supports faster recovery, optimal muscle development, a smooth moult and a balanced metabolism. Ideal during demanding seasons, but equally valuable during quieter build-up periods.

We continuously refine our products based on the same philosophy: effective, reliable and pigeon-friendly support, suitable for both beginners and experienced fanciers.

We sincerely thank you for your trust and wish you much success, health and enjoyment with your pigeons.

Your Backs Team

Backs Advisory Service

If you have any questions about Backs products or their application, you can always contact the Backs Advisory Service.

We will be happy to assist you discreetly and professionally.

The Backs logo consists of the word "Backs" written in a large, blue, cursive script font. A thick, solid blue horizontal line runs underneath the word, starting from the left and extending past the end of the word.

FEED SUPPLEMENT

PIGEON PECKING BLOCKS – THE BEDROCK OF THE BACKS LOFT!

Genuine loess soil, minerals, trace elements, and much more form the basis of the high-quality Backs pigeon pecking blocks.

Backs Pigeon Pecking Blocks “The Good Blue”

The well-known, indispensable feed supplement, continuously updated according to the latest knowledge.

Article No.

Bucks Mineral Menü

This mineral mix also contains grains and has a pleasant anise aroma. It is eagerly eaten by the pigeons and has the advantage that pigeons consistently take in a high amount of minerals.

Article No.	Contents
1055	6 kg
1058	12 kg

Bucks VI-SPU-MIN

This is not just a mineral feeding lime, as it also contains minerals, trace elements, as well as plenty of vitamins and amino acids such as methionine and lysine.

Article No.	Contents
1250	1 kg
1251	5 kg

This makes **VI-SPU-MIN** a product that can always be used when pigeons are exposed to increased stress. That means: from pairing to egg laying, during the rearing of young birds, during the racing season, and during the moulting period. VI-SPU-MIN can be given to the birds in small feeding trays, taken freely, by hand, or bound to the feed with oil.

The indispensable mineral mix, all year round!

Bucks Grit with Anise

A grit mix infused with anise, supplying your pigeons with essential minerals.

Article No.	Contents
1245	5 kg
1246	25 kg

Bucks Rodimin with Anise

A popular supplement, especially eagerly consumed by pigeons during the breeding season!

Bucks tip!
Rodimin can also be mixed with Bucks VI-SPU-MIN and offered together in a pot.

Article No.	Contents
1259	6 kg
1260	1 kg

FEED SUPPLEMENT

Backs Siegergrit – A household name in pigeon sport!!

With this product you ensure your pigeons receive the full richness of trace elements from the sea. Trace elements are indispensable for the pigeon's metabolism. Mineral iodine, iron, manganese, and sulfur compounds are among the best known from a spectrum of approximately 70 different trace elements contained in Backs Siegergrit!

Quality that pays off

By the way:

Backs Siegergrit contains more than 40% sea algae.

Article No.	Contents
1100	1 kg
1110	2,5 kg
1130	5kg
1140	10 kg
1120	25 kg

Backs Terra-Mineral

A natural product rich in trace elements and with a high silica content.

Backs Terra-Mineral should be supplied during every season. It can be perfectly bound to the feed using peat concentrate, GlutAmin, Backsi-Gen, or other preparations to moisten the feed.

Article No.	Contents
1261	1,5 kg
1262	5 kg

Backs Atlantic Mix

Brings the diversity of the sea into your pigeon loft.

The advantage of Backs Atlantic Mix is not only its varied composition, but also that it is completely consumed by the pigeons. Besides minerals such as mussel shells and redstone, Backs Atlantic Mix also contains brewer's yeast pellets and herbal extrudates.

Article No.	Contents
1045	5 kg

Backs Gizzard Grit

Washed and fire-dried, making them bacteria-free. They serve as tooth substitutes for pigeons.

Article No.	Contents
1220	1 kg

FEED SUPPLEMENT

Backs Liquid Minerals

Contains high concentrations of minerals and trace elements. Minerals and trace elements are extremely important for pigeons. They play a role in eggshell formation, feather development, and the structure of the skeleton. We recommend administration when pigeons have an increased need for minerals: during breeding, for weaned youngsters, and during the moulting period.

Article No.	Contents
1257	500 ml

Backs Peat Concentrate

An extract of marsh plants which, after dying under water, have undergone a natural fermentation process. This creates valuable humic compounds such as humic acids, oxalic acids, fulvic acids, organic protein compounds, various types of sugars, and micronutrients (including boron, strontium, barium, vanadium), tannins, minerals, and other organic breakdown products. Therefore, Backs peat concentrate should be given regularly to pigeons throughout the entire year!

Article No.	Contents
1395	1000 ml

Backs Brewer's Yeast

Brewer's yeast is undoubtedly one of the most valuable natural products we know. It contains vitamins, trace elements, amino acids, calcium, and phosphorus. A natural, rich vitamin B complex and many other substances whose value cannot be overestimated.

Article No.	Contents
1400	800 g

Backsi-Gen

A naturally derived liquid yeast product. The best source of vitamins, minerals, amino acids, and many other natural energy suppliers. The enzyme-rich yeast cells release their vital enzymes via the small intestine into the body. Metabolic processes are activated that promote functional cellular respiration. Program success with Backsi-Gen during breeding, the racing season, and exhibitions.

Article No.	Contents
1431	250 ml
1432	500 ml

Particularly valuable due to a high number of enzyme-containing yeast cells!

Backs Breeding & Moulting

A supplementary feed specially developed for the rearing of young pigeons.

Thanks to the addition of digestive enzymes, the feed is broken down and digested much more efficiently. In addition, Backs Breeding & Moulting contains intestinal flora stabilisers, supporting the development of the immune system. Backs Breeding & Moulting is a complete breeding product. This means that only mineral supplements and, if necessary, health-promoting products still need to be added.

Article No.

Contents

1732

500 g

Backs Protein Plus

A blend of high-quality animal proteins and mannan-oligosaccharides.

Pigeons need proteins to build muscle and feathering. Animal protein also improves the utilisation of plant protein absorbed through pigeon feed. Backs Protein Plus is therefore ideal for rearing young pigeons, for muscle recovery after hard races, and during the moulting period.

Backs Protein Plus must be administered via the feed.

Article No.

Contents

1405

400 g

Backs RACE 2010

A protein-containing powder that must be administered via the feed.

RACE 2010 is specially designed for the racing season. Unfortunately, we are not permitted to provide further information here. Administration of RACE 2010 should begin one week before the first training flights.

Article No.

Inhalt

FEED SUPPLEMENT

Backs Bambino – Egg Feed for Rearing Young Pigeons

Backs Bambino is an egg feed containing shrimp and ant eggs. It provides high-quality animal protein to support muscle development and the formation of a strong feathering in young pigeons. Backs Bambino also contains premium seeds and honey.

Article No.	Contents
1425	5 kg

Backs Super Backsin – Multivitamin Solution

Super-Backsin serves as a short-term vitamin boost. During the racing season, Super-Backsin replenishes depleted vitamin reserves.

Notably, Super-Backsin has a high vitamin D content, which promotes calcium deposition and is known to have a very positive effect on the pigeon's muscular system. Every pigeon fancier should use Super-Backsin. It is particularly helpful for bridging stressful situations or periods of illness.

Article No.	Contents
1440	250 ml
1441	500 ml

Backs Vitamin B-Complex

A water-soluble concentrate. B-group vitamins perform various functions in metabolism and are essential building blocks of enzymes. They play a major role in carbohydrate, protein, and fat metabolism. Backs Vitamin B-Complex can also be used during sulfonamide or antibiotic treatments and after vaccinations.

Article No.	Contents
1373	100 ml

Backs Vitamin E + Selenium

Regulates carbohydrate and muscle metabolism, balances glycogen levels, and promotes the function of the reproductive glands.

Article No.	Contents
1372	100 ml

Backs Protection

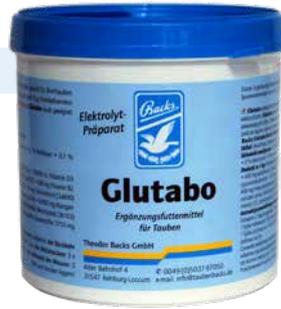

The ideal aid during periods of physical stress. Especially before the season, when pigeons have not been able to fly freely for extended periods, uneven or unbalanced flight can often be observed. During the racing season, strain on the wings – particularly at the muscle attachments – can be high, potentially leading to stiffness, joint pain, and joint damage.

Article No.	Contents
1345	30 ml

Backs Glutabo+ with Electrolytes

This excellent electrolyte supplement consists of glucose sugar, vitamins, trace elements, and electrolytes. Backs Glutabo+ is preferably administered before and after races.

Article No.	Contents
1270	500 g

Backs Electrolytes

An excellent combination of electrolytes used in cases of fluid loss. With Backs Electrolytes, your pigeons fly faster. In principle, it should be administered after heavy exertion.

Article No.	Contents
1271	500 g

Dosage:

12 g = 1 level tablespoon per 1 litre of water
(Daily amount for 25 pigeons)

Backs Liquid Electrolyte

Important before and after races. Especially on warm days, pigeons lose a lot of body fluid.

Article No.	Contents
1274	250 ml

Dosage:

10 ml per 1 litre of water

Indispensable during the racing season

Backs Magnesium

Contains the substances extremely important for the pigeon's body: magnesium, potassium, sodium, and vitamin C in an easily digestible form. Magnesium reduces the risk of muscle acidification during and after races. Sodium ensures high water retention in body cells, while potassium regulates the upper limit of the body's optimal storage capacity. Vitamin C boosts the immune system and protects blood cells against free radicals.

Article No.	Contents
1273	300 g

Backs Extra Energy

Contains high-quality carbohydrates, vitamin B12, vitamin C, and electrolytes. The carefully selected carbohydrates are evenly converted into glycogen, allowing the pigeon to draw energy from carbohydrates for a longer period. Vitamin C protects the cells, while electrolytes regulate fluid balance and ensure sufficient moisture is stored in the body—essential during hard races and warm weather. A complete product that can be used during the last two days before basketing.

Article No.	Contents
1737	400 g

FEED SUPPLEMENT

Backs Omega Plus Oil

Developed according to the latest scientific insights in pigeon nutrition. Through an optimal combination of omega fatty acids, a higher energy supply for pigeons is achieved. The lecithin present in the oil also supports the conversion, storage, and transport of fatty acids in the body. It is recommended to give Omega Plus Oil two to three times per week, year-round.

Article No.	Contents
1330	250 ml
1331	500 ml

Backs Cod Liver Oil

This cod liver oil is of excellent quality and is particularly suitable for administration via feed. With its high content of vitamins A and D3, it replaces sunlight during early spring, autumn, and winter.

Article No.	Contents
1300	100 ml
1310	250 ml
1320	500 ml

Backs tip:

Give cod liver oil over the feed and mix with VI-SPU-MIN or Backs Brewer's Yeast. This helps maintain healthy pigeons throughout spring, autumn, and winter.

Backs Omega-3 Marine Oil from Wild-Caught Sources

Marine-3 Oil is a high-quality oil derived from marine sources. This oil is rich in essential omega-3 fatty acids, which are of great importance for the health of pigeons. Omega-3 fatty acids, especially EPA (eicosapentaenoic acid) and DHA (docosahexaenoic acid), are crucial for the development of the nervous system and the maintenance of a healthy heart function. They strengthen the immune system and have anti-inflammatory properties.

Article No.	Contents
1305	250 ml

Backs Egyptian Organic Black Cumin Oil

Black cumin oil, extracted from the seeds of *Nigella sativa*, has proven to be a valuable natural remedy for various animals, including pigeons.

This plant-based oil is rich in essential nutrients and bioactive compounds that enhance the immune system and overall health. Additionally, black cumin oil has a calming effect and helps reduce stress, for example during transport.

Article No.	Contents
1335	250 ml

Backs Lecithin

The constant demands during breeding, the racing season, or moulting place high stress on the pigeon's body. All body cells must be supplemented with the necessary vital substances.

Lecithin is the main component of egg yolk and is present in nearly all parts of the body, particularly in the brain and spinal cord. This highlights the crucial importance of lecithin for the entire organism. During the racing season, lecithin is indispensable as a high-quality muscle fuel. Plant-based lecithin is a highly valuable active ingredient that pigeons constantly require.

Recommended: Provide pigeons with lecithin two to three times per week, year-round.

Article No.	Contents
1325	100 ml
1326	250 ml

Backs Garlic Oil

A natural product for pigeons. Garlic contains allicin and other sulfur-containing active substances. It also provides B vitamins, proteins, amino acids, as well as calcium, phosphorus, selenium, and zinc. Backs Garlic Oil is therefore a year-round supplement supporting overall health.

Article No.	Contents
1355	250 ml

Backs Wheat Germ Oil

A natural vitamin E supplement. Characterized by its high content of natural vitamin E, it is especially suitable for mixing with feed before pairing.

Article No.	Contents
1350	100 ml
1380	250 ml

Backs Corn Germ Oil

Contains a particularly high content of vitamin E and essential fatty acids. Backs Corn Germ Oil should be administered via feed especially during the racing season and enriched with Backs Extra Energy for optimal performance.

Article No.	Contents
1360	250 ml
1370	500 ml

FEED SUPPLEMENT

Backs Hemp Oil

Contains approximately 90% unsaturated fatty acids, including omega-3, omega-6, and the rare omega-9 fatty acids. Due to its fatty acid profile, Backs Hemp Oil is an excellent energy source for pigeons, especially during the racing season.

Article No.

1365

Contents

250 ml

Recommended administration:
During the racing season, give on the last three days before basketing.

Backs Soy Oil & Oregano

Contains essential oils. Certain essential oils stimulate digestion, bile, and enzyme secretion in the gut, optimizing feed utilisation. Poor digestion can create conditions for harmful microorganisms and intestinal parasites. Digestive disorders, such as loose droppings or coccidia, may occur, particularly in stressful situations. Recommended administration: One week prior to breeding. For weaned young pigeons and pigeons during moulting: two consecutive days per week. During the racing season: one to two days at the beginning of the week. Must be administered via feed.

Article No.

1756

Contents

500 ml

Backs Liquid Oregano

Has the same beneficial properties as Backs Soy Oil & Oregano but is water-soluble.

Article No.

FEED SUPPLEMENT

Backs Willow Bark Tea

The components of willow bark include salicyl alcohol glycosides, flavonoids, phenolic acids, and tannins. Salicin is broken down in the gut into salicyl alcohol and glucose and then converted in the liver into salicylic acid, the active ingredient in aspirin. While we cannot specify its effects in pigeons, its use is recommended during wet and cold periods and before pairing.

DISINFECTION AND CARE

Backs KokziDes

KokziDes is a specialised disinfectant for the thorough control of coccidia, worm eggs, mite and lice stages, bacteria, fungi, and various viruses. It even destroys persistent parasitic forms such as Eimeria and Isospora oocysts and can be used broadly for lofts, stables, and animal

Article No.	Contents
2446	250 ml

AR Backs

AR Backs is a universal spray with immediate action and a long-lasting effect up to 6 weeks. It combats both flying insects (flies, mosquitoes, moths) and crawling insects (crickets, ants, mites, silverfish, and lice).

Usage: For surfaces in pigeon lofts, bird cages, enclosures, and animal housing. Spray from approximately 30–50 cm until the surface is lightly moistened. Animals do not need to be removed, but ventilate immediately after application.

Mator Mineral is a mixture that pigeons eat with great appetite. It contains all essential minerals and trace elements your pigeons need for a trouble-free breeding, racing and moulting period. The added grit supports proper grinding of the feed in the gizzard. Mator Mineral has a high calcium content in relation to phosphorus, ensuring that deficiencies present in the feed are correctly balanced.

Mator Mineral

Mator Ocean Gold perfectly complements the Mator feeds. Nothing else is needed to guide your pigeons optimally through the moulting period. During the breeding season, Mator Ocean Gold ensures excellent growth of the young pigeons. For both old and young pigeons, and throughout the racing season, Ocean Gold is the ideal supplementary product.

Mator Ocean Gold

Especially for very warm days and for young pigeons (heat and stress in the baskets), Mator has developed a mixture that is ideal for the day of basketing—the final meal before your favourites enter the travelling baskets. The Boarding Mix contains a very high proportion of polished round rice. This rice absorbs and retains a large amount of moisture, which is essential on extremely hot days. In practice, we see that pigeons drink far less water immediately after the race. Thanks to this advantage, more of your racing pigeons appear in the result sheets.

Premium Boarding Mix

Crude Protein	14,2%	Crude Fiber	7,9%
Digestible Protein	8,0%	Energy, kcal/kg	3690
Crude Fat	15,3%	Omega ratio	3 : 1
Carbohydrates	49,2%		

The name of this mixture leaves little to the imagination. It is the ideal winter mixture, suitable for use immediately after the moulting period right through to pairing. Whether pigeons are kept in training during winter or remain indoors, this mixture helps them maintain an ideal body weight. Thanks to the wide variety of both coarse and softer fibres, the intestinal tract is completely cleansed within three weeks. Residual feed remains from the moulting or breeding period are, as it were, swept out of the digestive system, allowing nutrients to be optimally absorbed once again.

Premium Rest

Crude Protein	11,1%	Crude Fiber	7,5%
Digestible Protein	6,5%	Energy, kcal/kg	3150
Crude Fat	6,5%	Omega ratio	6,7 : 1
Carbohydrates	59,5%		

Premium Super Breeding

Premium Super Breeding features an optimal balance of omega-3 and omega-6 fatty acids. This ensures a silky-soft feather condition and optimal orientation and memory capacity. In short, an outstanding breeding mixture with many high-quality characteristics. Nothing is left behind in the feeding tray, and the pigeons show a very healthy appearance. Apart from grit and minerals, no additional supplements are required to breed round after round of beautifully developed young pigeons.

Crude Protein	16,3%
Digestible Protein	8,7%
Crude Fat	12,0%
Carbohydrates	49,9%
Crude Fiber	7,4%
Energy, kcal/kg	3536
Omega ratio	2,8 : 1

Premium Moulting

Premium Moulting is a superb mixture that ensures an optimal moulting period. Thanks to the wide variety of fat-rich seeds and the high-quality digestible proteins, pigeons are subjected to far less strain. This lays the foundation for an exceptionally soft and complete plumage. The specific composition guarantees an improved distribution and higher absorption of proteins, allowing the moulting to proceed more smoothly and efficiently. Optimised fatty acid ratios contribute to stronger resistance and better overall health.

Crude Protein	14,2%
Digestible Protein	7,5%
Crude Fat	8,4%
Carbohydrates	56,3%
Crude Fiber	6,3%
Energy, kcal/kg	3308
Omega ratio	4 : 1

Premium Super Moulting

This Super Moulting mixture has been specially designed for fanciers who prefer not to use additional supplements on the feed, yet still want to provide the very best care for their pigeons during the moulting period. The high-quality, complete amino acid profile allows pigeons to achieve optimal results with less feed intake. In addition, the omega fatty acid balance in Premium Super Moulting is perfectly optimised through the inclusion of perilla seed. This results in an exceptionally soft new plumage and ensures that the moulting proceeds at the highest possible level. A top-quality feed has been created that truly stands apart from all others.

Crude Protein	15,4%
Digestible Protein	8,4%
Crude Fat	12,5%
Carbohydrates	49,8%
Crude Fiber	8,0%
Energy, kcal/kg	3578
Omega ratio	2,6 : 1

Young Pigeons HOT

One single mixture suitable for young pigeons from weaning through to young bird races (0-350 miles). Young pigeons must learn to adapt to changing conditions on their own. Hotter and drier air has a direct impact on pigeon health. Young birds in particular have a high demand for moisture to prevent dehydration.

By reducing the amount of maize in the mixture, less body heat is produced. The addition of polished round rice allows the body to absorb and retain more moisture. A well-balanced protein ratio ensures that young pigeons maintain sufficient muscle firmness. This mixture supports optimal intestinal function, leading to better nutrient absorption and a reduced risk of young bird sickness.

Crude Protein	12,8%	Crude Fiber	5,9%
Digestible Protein	6,9%	Energy, kcal/kg	3295
Crude Fat	7,4%	Omega ratio	3,7 : 1
Carbohydrates	59%		

Premium Blitzmix

For the 2025 season, we introduced a new perfectly balanced mixture, specially developed for specialists in sprint racing and the widowhood hen system. This new mixture offers a user-friendly feeding system that perfectly suits various racing disciplines.

For widowhood hens: suitable for sprint races through to major middle-long distance and day races.

For cocks (widowers): ideal for sprint races through to middle distance and small semi-long distance races with one night in the basket.

Crude Protein	11,7%	Crude Fiber	5,9%
Digestible Protein	6,8%	Energy, kcal/kg	3396
Crude Fat	6,2%	Omega ratio	2,9 : 1
Carbohydrates	61%		

Premium Breeding Olympia

Premium Breeding Olympia ensures optimal growth, allowing breeding pairs to raise multiple rounds while remaining active and in excellent health. Thanks to its unique composition, the level of digestible protein is exceptionally high without placing strain on the organism. As a result, pigeons utilise the feed far more efficiently, which also leads to significant savings in the total amount of feed required.

Crude Protein	15,9%	Crude Fiber	6,3%
Digestible Protein	8,4%	Energy, kcal/kg	3409
Crude Fat	9,9%	Omega ratio	4 : 1
Carbohydrates	53,3%		

Premium Turbo Extreme

As summers gradually become warmer, energy mixtures must be adapted to changing conditions. One of the key additions to this new energy blend is perilla seed. Perilla seed has anti-inflammatory properties, especially for the intestines, acts as a natural antioxidant, boosts resistance, and helps regulate blood sugar levels.

The proportion of polished round rice has also been significantly increased. If thirst can be reduced by adding more round rice to the mixture, this is a clear advantage. By replacing part of the maize with polished round rice, the level of gradually absorbable carbohydrates has not been reduced – on the contrary, it has even slightly improved. These carbohydrates are essential, as they allow pigeons to fly longer on carbohydrate-based energy.

Crude Protein	13,2%	Crude Fiber	8,1%
Digestible Protein	7,8%	Energy, kcal/kg	3685
Crude Fat	13,3%	Omega ratio	2,8 : 1
Carbohydrates	51,1%		

Premium HE

This mixture was specially developed for extreme long-distance and overnight races. Premium HE is added during the final days before basketing to ensure that pigeons are supplied with sufficient energy for the journey. This High Energy mixture contains more than 20% fat, allowing ample energy reserves to be stored in the "energy tanks" for extreme distances. The HE mixture can be fed in combination with Premium Barcelona during the last 4–5 days before basketing. It is also highly suitable for separate feeding in small pots, placed next to the nest bowls of breeding long-distance pigeons.

Crude Protein	16,5%	Crude Fiber	9,3%
Digestible Protein	9,8%	Energy, kcal/kg	4028
Crude Fat	20,3%	Omega ratio	6 : 1

Premium Detox

Is it possible to completely cleanse a racing pigeon from the inside in a natural way, improve blood values, and detoxify the liver? This unique mixture contains a high percentage of milk thistle seed. Milk thistle has a strong reputation for its positive effects on the liver function and in cases of poisoning. In addition, a substantial amount of perilla seed has been added. Besides a clean and healthy liver, your racing pigeons will also develop a beautiful, silky feather condition.

Premium Barcelona

The Premium Barcelona mixture is a refined formula specifically designed to meet the demands of heavy long-distance races from 350 to 800 miles. This feed represents our continuous commitment to excellence and innovation in pigeon sport nutrition. We have worked with precision to optimise the omega ratios in this mixture. This improvement supports optimal pigeon health, enhances feather quality, and strengthens the immune system. To further increase nutritional value, high-quality perilla seed has been added. Rich in essential fatty acids, it contributes to overall vitality and endurance. For improved digestibility and long-lasting energy, round rice has been included in the formula. This promotes better moisture absorption, which is essential during extreme heat and transport conditions. This feed is designed to suit different racing systems. Whether you prefer widowhood or natural racing, this mixture provides ideal nutritional support. We invite you to experience this new dimension in pigeon nutrition and prepare your pigeons for exceptional performances over distances of 350 to 800 miles.

Digestible Protein	8%	Energy, kcal/kg	3403
Crude Fat	10,3%	Omega ratio	3 : 1
Carbohydrates	52%		

Premium Complete Plus

This mixture is fully complete, which is why it is called Complete Plus. This renewed formula is designed for fanciers who find complex feeding systems too demanding and are mainly looking for simplicity—ideal for those with limited time. Many fanciers have already proven that top results can be achieved with this mixture, as it leaves very little room for mistakes. "I looked at what pigeons need to cleanse properly, sufficient protein to nourish the muscles, and finally enough energy to finish the races strongly. All of this has been blended in the correct proportions. The result is one single mixture for all races up to 6½-7 hours of flying."

Crude Protein	12,8%	Crude Fiber	6,1%
Digestible Protein	6,9%	Energy, kcal/kg	3374
Crude Fat	8,4%	Omega ratio	3,5 : 1
Carbohydrates	57,9%		

Premium Supreme

This renewed racing mixture is extremely suitable for weekly middle-distance and long-distance races with two nights in the basket. Premium Supreme ensures an improved energy supply and a more efficient metabolism with less waste production. Thanks to the addition of polished round rice, a large amount of moisture is absorbed and retained in the body. The mixture is highly digestible and less demanding on the organisms, resulting in reduced fatigue upon return and much faster recovery. Muscle tissue and energy reserves are rebuilt more quickly with Premium Supreme. The improved omega balance contributes to stronger natural resistance and overall health.

Crude Protein	15,1%	Crude Fiber	8,3%
Digestible Protein	8,0%	Energy, kcal/kg	3551
Crude Fat	12,5%	Omega ratio	4,1 : 1
Carbohydrates	50,3%		

Premium Start

Depending on the severity of the races, this mixture is used during the first half of the week, starting from the day after return. In this way, the body is perfectly cleansed and at the same time prepared for the next phase. For easy sprint and middle-distance races, this mixture alone can largely suffice. It is also an ideal mixture for racing widow hens, which are able to perform at top level for weeks on a smaller amount of available energy.

Crude Protein	12,2%	Crude Fiber	6,3%
Digestible Protein	7,2%	Energy, kcal/kg	3228
Crude Fat	6,4%	Omega ratio	5 : 1
Carbohydrates	59,7%		

Premium Super Start

Premium Super Start has a very high fat and digestible protein content. In addition, Super Start contains a high level of carbohydrates and fibre. This ensures very fast arecovery after a race or training session and cleanses the intestines, allowing rapid rebuilding of muscle mass and energy reserves. It is also highly suitable for regions where strong sea winds frequently occur and extra energy is required in preparation for a race. Premium Super Start is the ultimate top mixture for pigeon fanciers who accept only the very best.

Crude Protein	14,0%	Crude Fiber	8,6%
Digestible Protein	8,1%	Energy, kcal/kg	3543
Crude Fat	11,8%	Omega ratio	4,9 : 1
Carbohydrates	51,4%		

Premium Athletic

Premium Athletic is used in the middle and towards the end of the week, from sprint races up to long-distance (day-long) races. It is a mixture with a relatively high fat content and high-quality digestible protein. For this racing mixture, Matador chooses a low legume content combined with highly convertible energy and an excellent omega balance. Premium Athletic contains, among other things, high-quality perilla seed and milk thistle seed. Perilla seed is a natural anti-inflammatory, especially for the intestines, a natural antioxidant, immune-boosting, and rich in omega-3 fatty acids. Milk thistle seed is known for its liver-protective properties, supports optimal fat metabolism, and contains valuable omega-6 fatty acids.

Crude Protein	14,5%	Crude Fiber	5,9%
Digestible Protein	7,5%	Energy, kcal/kg	3326
Crude Fat	9,2%	Omega ratio	3,5 : 1
Carbohydrates	56%		

Matador – Always in Motion, Always Forward

At Matador, we look beyond today. We explore new avenues in pigeon feed, follow the latest developments in the sport, and combine experience with scientific knowledge. Every seed and grain is carefully selected to create balanced mixes that optimally support the health and performance of your pigeons. After two years of intensive testing, we proudly present our new, unique blend – the result of passion, practice, and science. We continually strive for improvement: new insights, smart formulations, and the best of both experience and research. Our premium feed formulas deliver energy, protein, and fats in the right balance, with attention to health, immunity, and peak performance. Whether you are just starting out or already covering thousands of kilometers, with Matador you choose feed that grows with the evolution of the sport.

Matador – Constant Motion, Constant Progress.

Premium Alpha 1

new

The Next Step in Pigeon Racing: Peak Form Starts at Home

For those who aim to perform week after week, it's clear: a race is not won only in the hours after returning home. The difference between participating and winning is made during this critical regeneration phase. Our new regeneration mix – Premium Alpha 1 - is designed for that decisive moment – recovery immediately after arrival and the following day. It is a unique combination of Turbo Extreme, Detox, and Start, with one goal: cleanse the body, restore, and bring it back to peak form. This blend fills the missing link in care: the recovery period directly after the race. While other feeds focus mainly on energy or growth, this mix targets complete internal recovery.

Three functions in one:

Muscle and energy recovery through balanced proteins. Cleansing of intestines, liver, and blood with natural fibers and purifying seeds.

Immune system protection through optimal omega fatty acids. Each pellet is carefully chosen for rapid absorption and visible recovery within 24 hours. Your pigeons return to top form faster, ready to perform again. Feeding instructions: Administer immediately upon return, replenishing the feed as it is eaten, and again the day after arrival for optimal recovery. After that, return to the normal weekly system. Every pigeon, from first to last arrival, receives exactly what it needs to regenerate quickly and remain competitive. In short: one blend for recovery, cleansing, and rebuilding, developed with top lofts and tested in practice.

Faster visible recovery and more consistent performance. **Matador – Where Recovery Begins and Performance is Born.**
